Foreword VII

ROBUSTNESS IN OR-DA

H. Aissi, C. Bazgan, D. Vanderpooten
Min-max and min-max regret versions of some combinatorial optimization problems: a survey 1

M. A. Aloulou, C. Artigues
Flexible solutions in disjunctive scheduling: general formulation and study of the flow-shop case 33

L. C. Dias
A note on the role of robustness analysis in decision-aiding processes 53

V. Gabrel, C. Murat
Robust shortest path problems 71

S. Greco, V. Mousseau, R. Slowiński
Robust multiple criteria ranking using a set of additive value functions 95

R. Kalaï, C. Lamboray
L' α -robustesse lexicographique : une relaxation de la β -robustesse 129

C. Lamboray
Supporting the search for a group ranking with robust conclusions on prudent orders 145

M. Minoux
Duality, Robustness, and 2-stage robust LP decision models. Application to Robust PERT Scheduling 173

V. Th. Paschos, O. A. Telelis, V. Zissimopoulos
A robust 2-stage version for the STEINER TREE problem 191

B. Roy
La robustesse en recherche opérationnelle et aide à la décision : une préoccupation multi-facettes 209

M. Salazar-Neumann
*The robust shortest path and the single-source shortest path problems:
interval data* 237

E. Sanlaville
*Sensitivity and Robustness analyses in scheduling: the two machine with
communication case* 253

K. Sörensen, M. Sevaux
*A practical approach for robust and flexible vehicle routing using
metaheuristics and Monte Carlo sampling* 269

Ph. Vallin
*Recherche de conclusions robustes dans une problématique de placements
financiers en environnement incertain* 287
